brought to you by the letters C O L L I S I O N S

Bruce Springsteen week

housekeeping

still
You're [^]doing great!

If you're behind, please see me after class

Questions from QS&BB readings due on the day after the lesson

isp220@pa.msu.edu is working now... thanks for pushing me

please put "reading notes" in the subject

Any issues with MasteringPhysics? See me!

The first MP homework will appear on Saturday night

Refunding instructions are on the blog

You should be on Facebook...I've started announcing things

You should watch the course home page which is a Wordpress blog

Okay. MSU has broken Feedburner. I'm looking for alternatives

Remember, I'm out of town on 1/24, so no class that day

aaackkk!

issue with LON-CAPA - hardware

typo in the Lesson 6 example right at 6.1

I'll fix it right after class

my face is red

"CAPER"* cards

A

B

C

D

The routine:

1. I ask a question with **D** responses
2. You fold your card and put it on your forehead
3. Then you defend your answer to the person next to you
4. I might then ask a second time
5. "I don't know?" ...show a blank square

Bring it to class or:

There's an app for that:

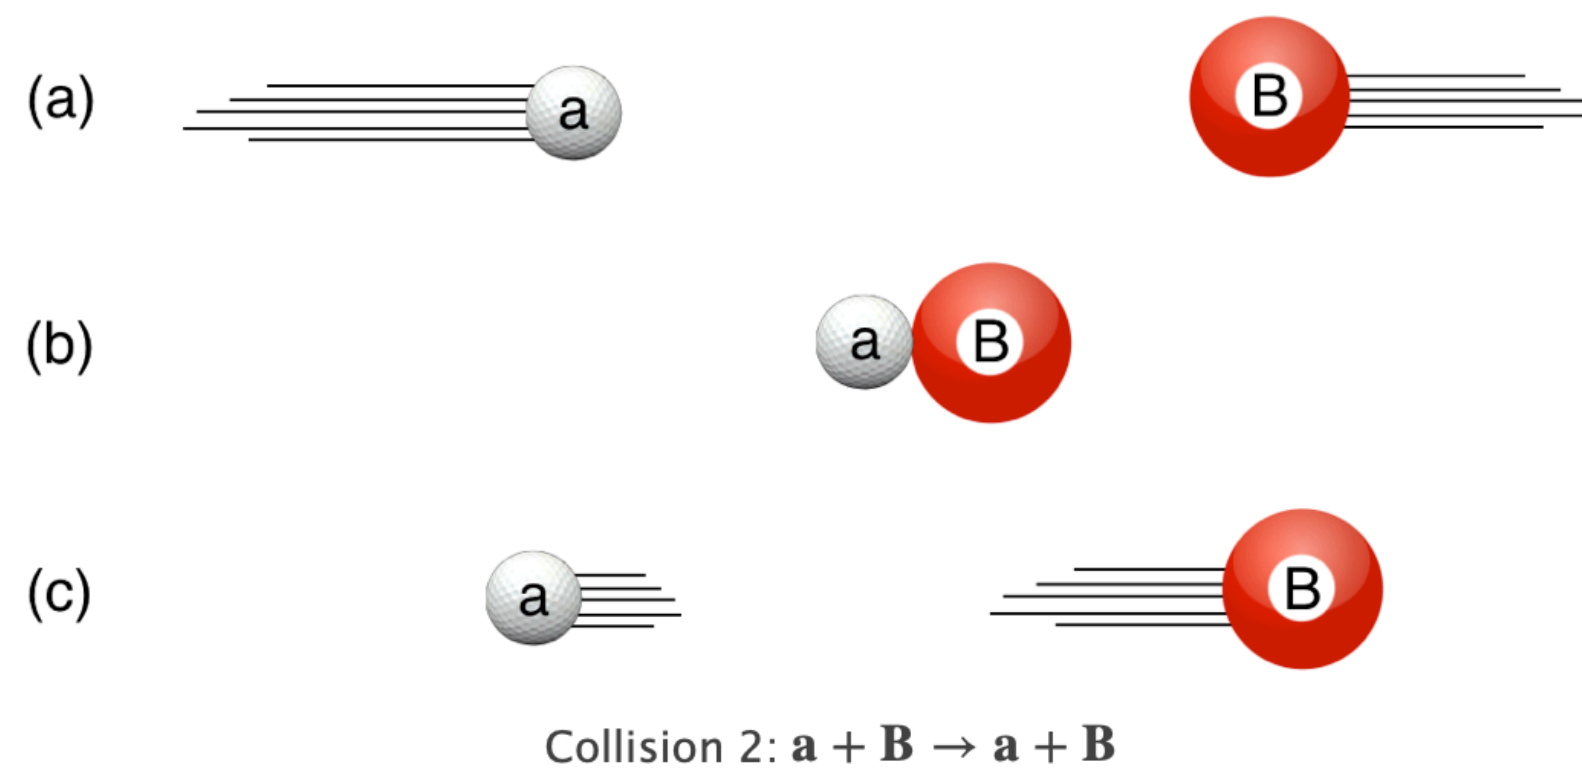

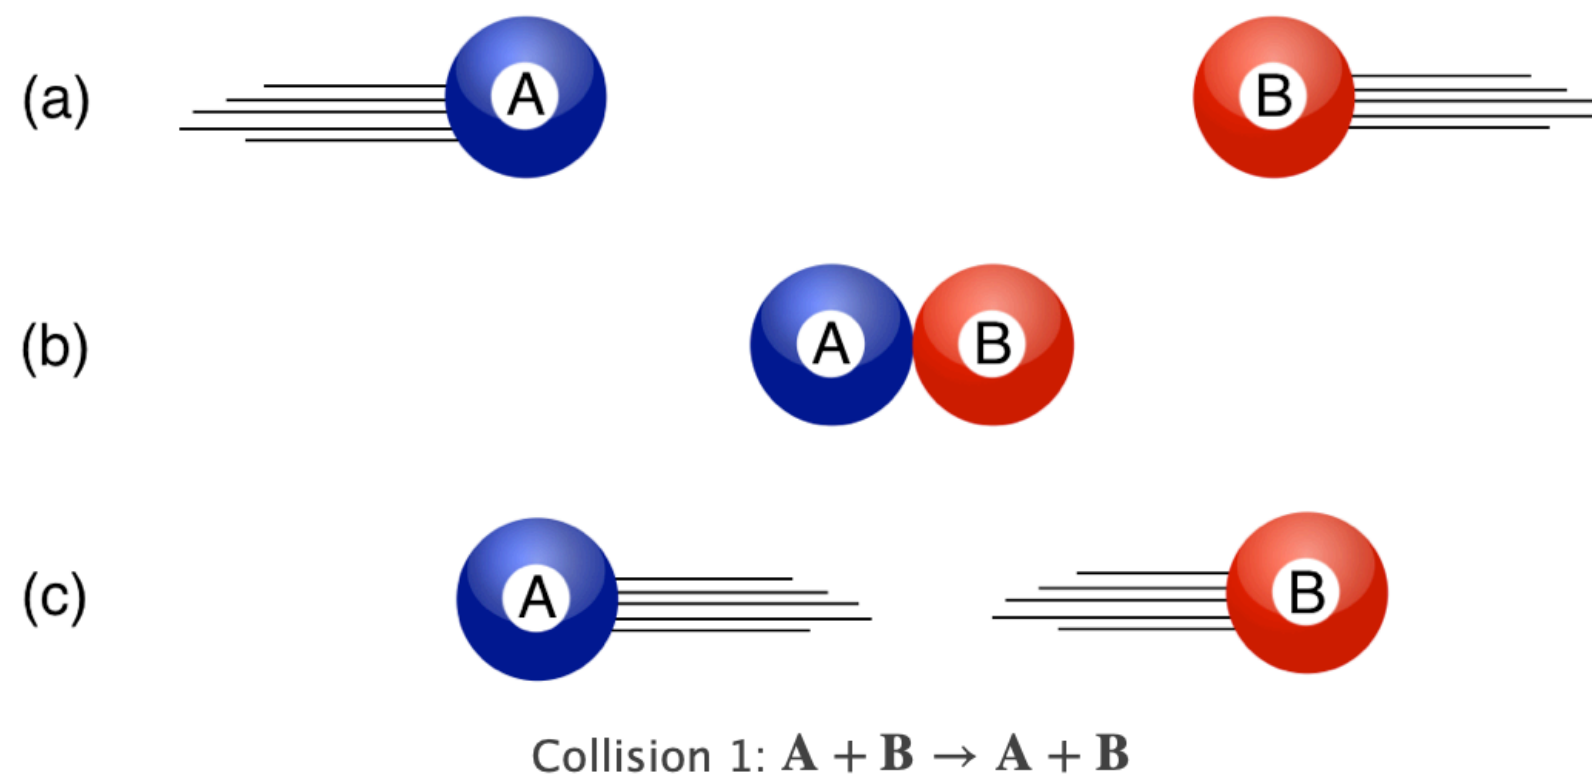

<https://itunes.apple.com/us/app/capercard/id843445157?mt=8>

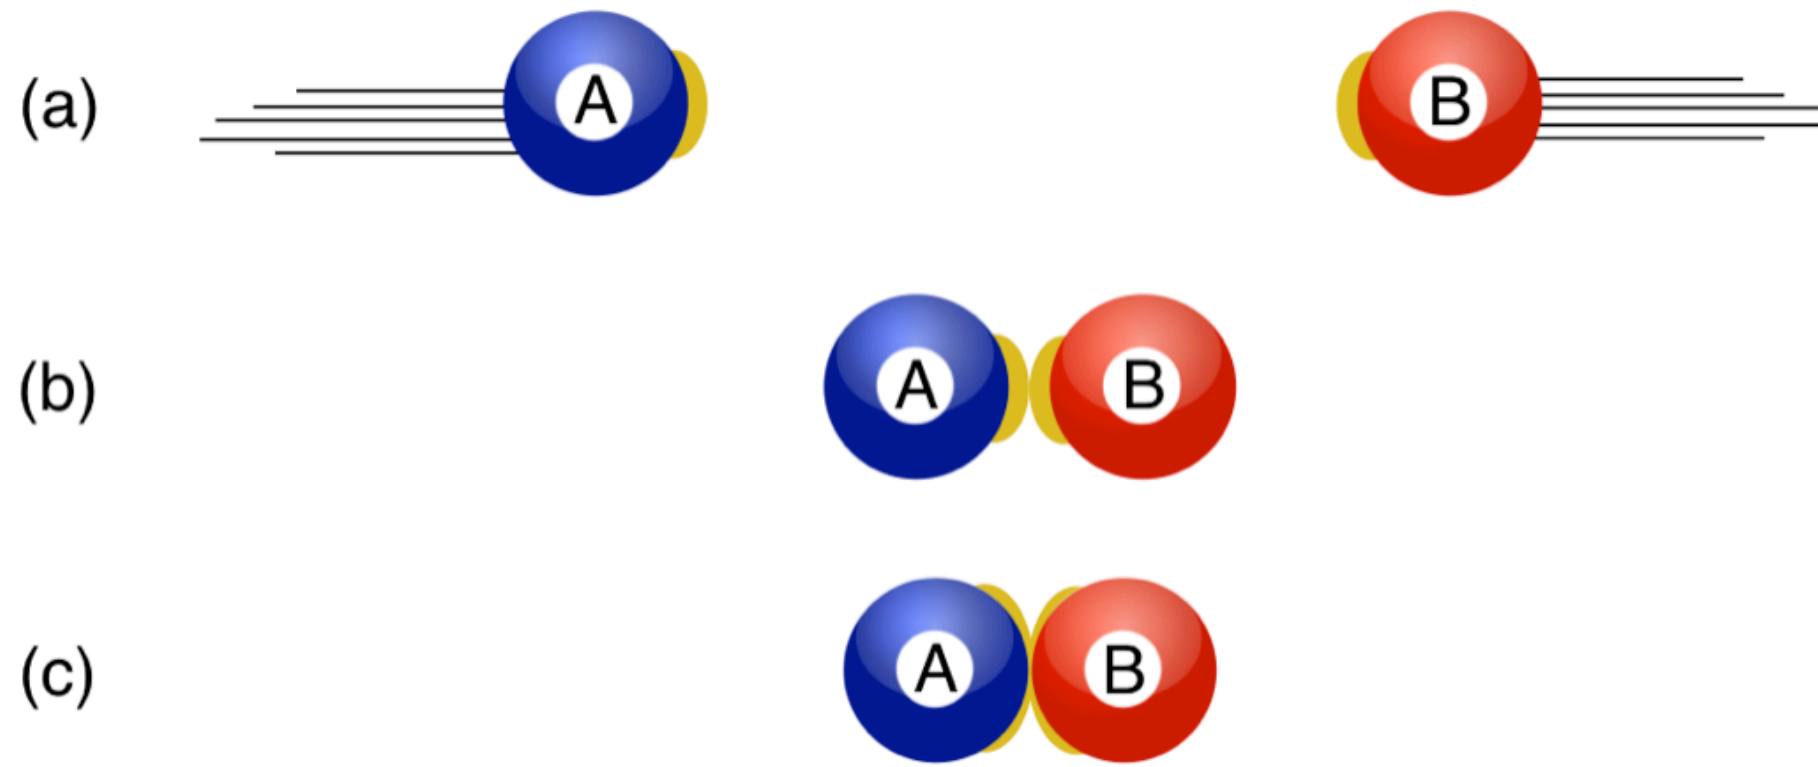

<https://play.google.com/store/apps/details?id=com.hexational.capercard&hl=en>

reading quiz

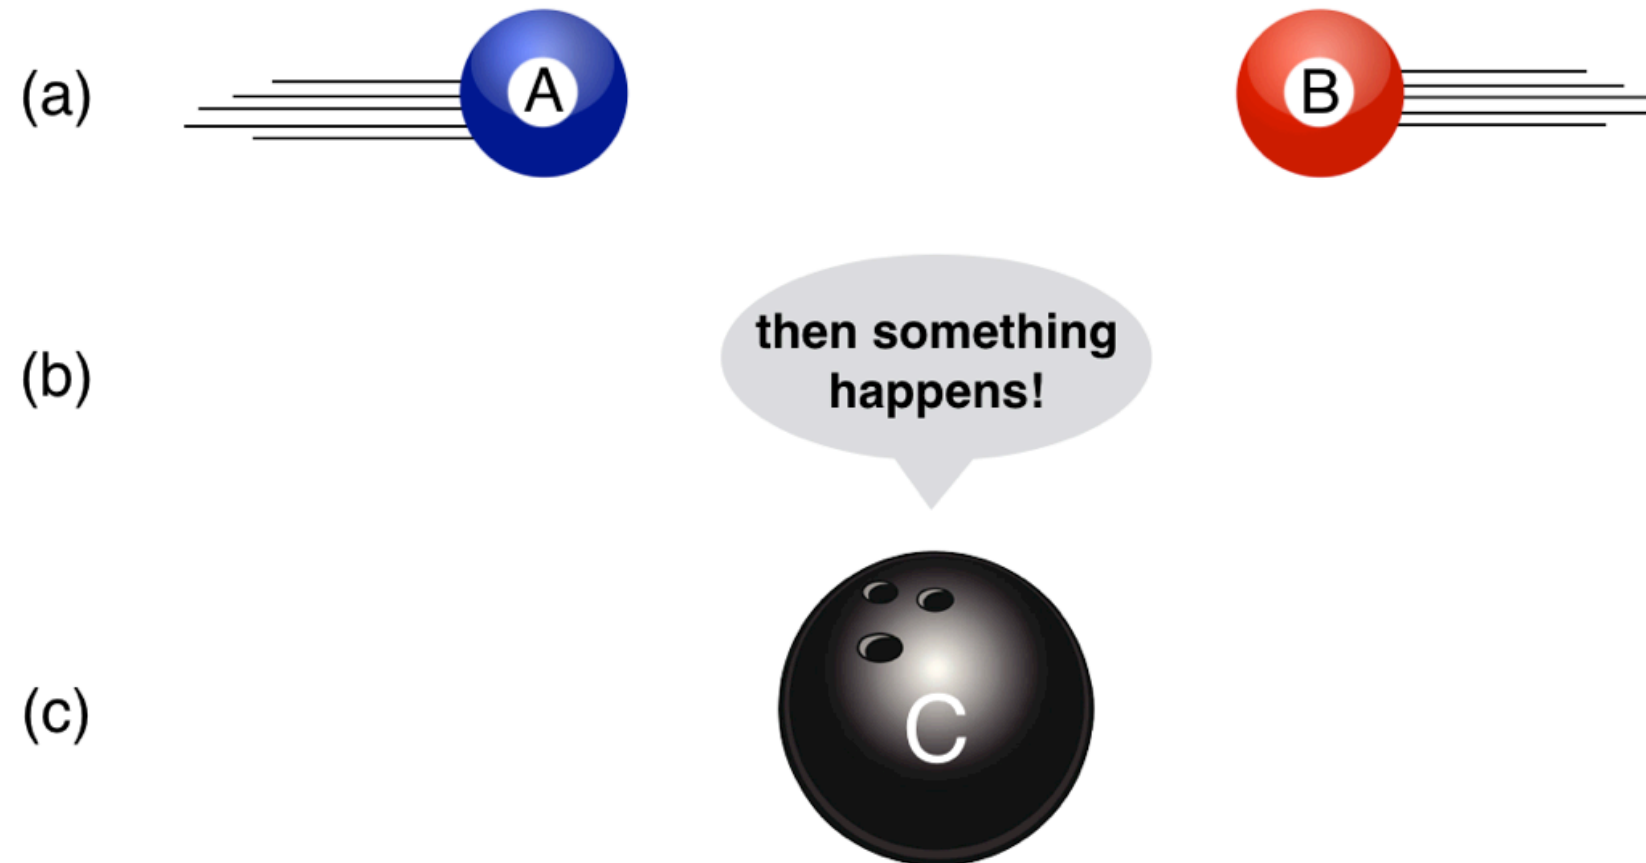

demonstrations

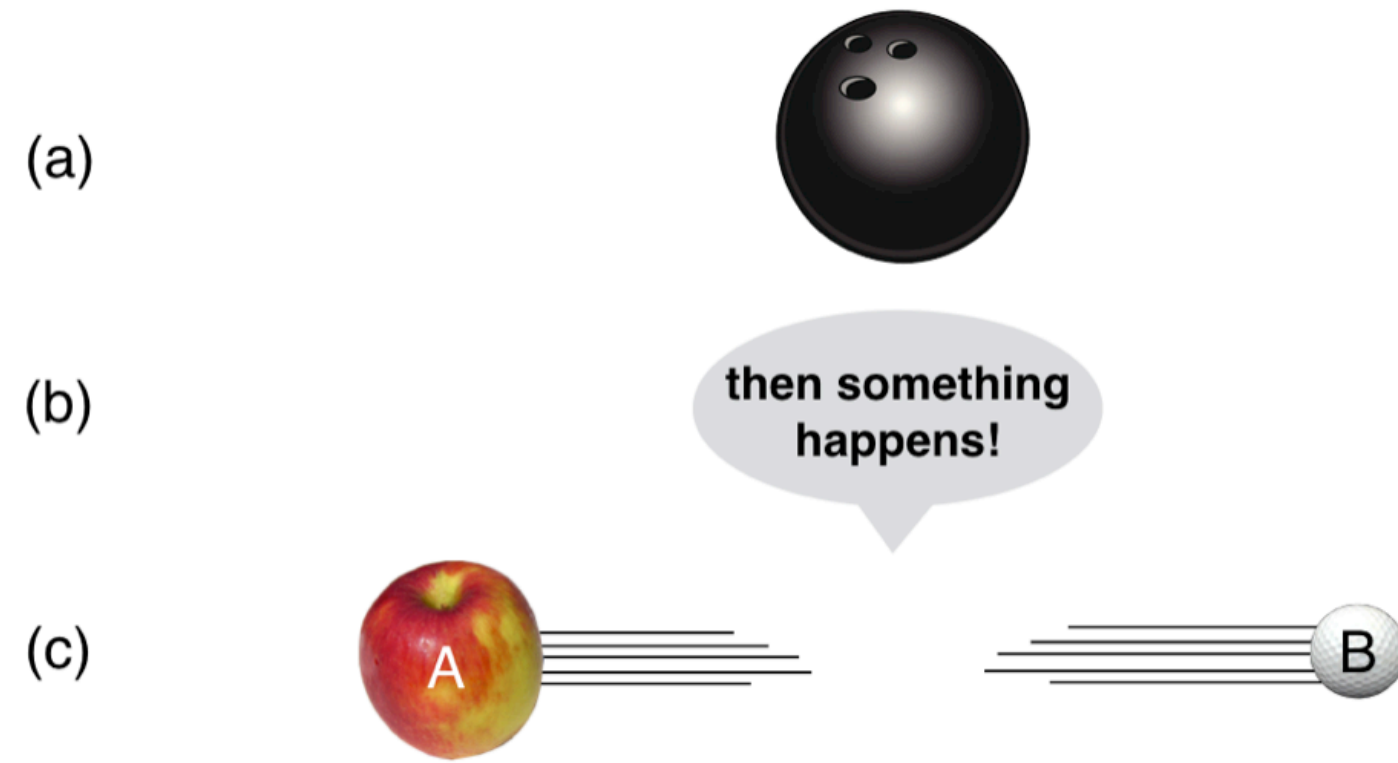

Collision 3 with glue: $A + B \rightarrow C$ The glue is brown.

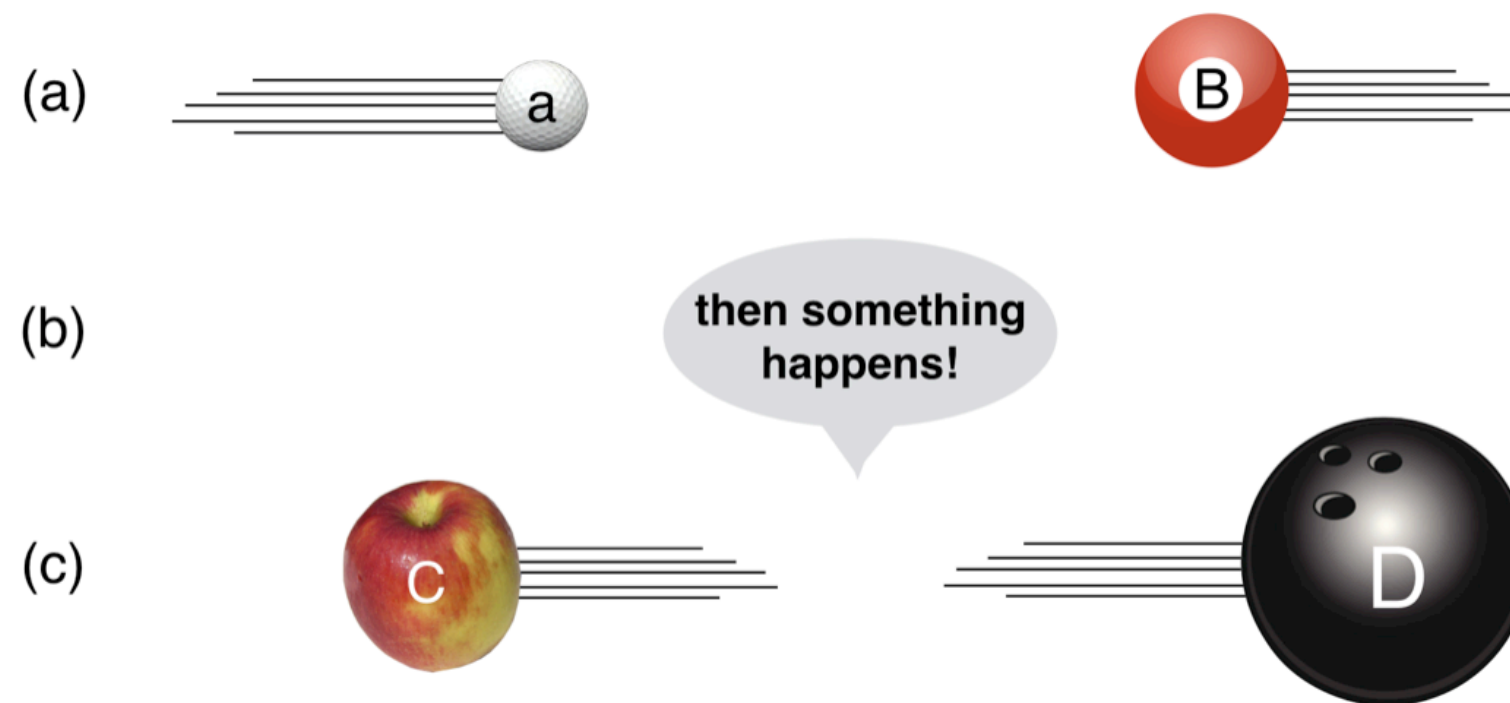

new physics!

$A + B \rightarrow C$ What you put in may not be what you get out of a quantum collision.

Collision 4: $C \rightarrow a + B$, a quantum particle decay.

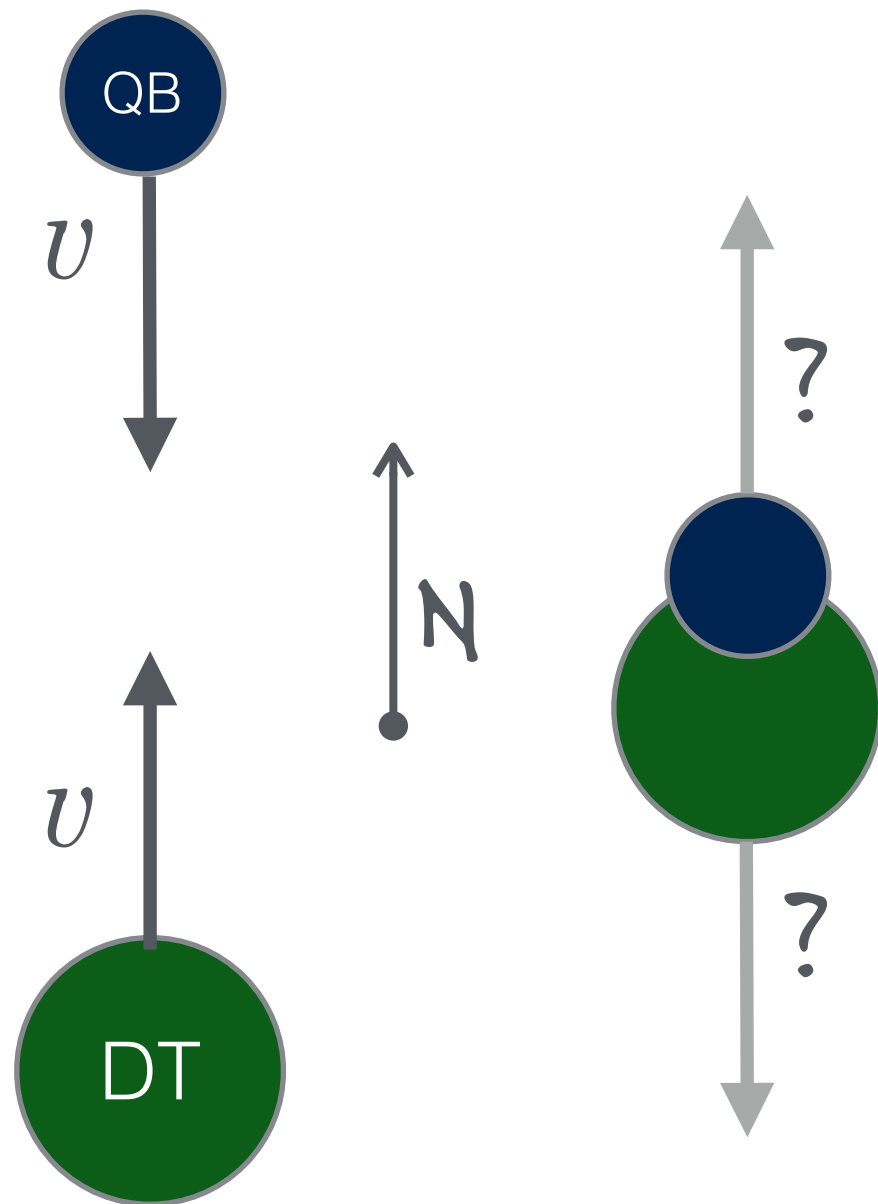

Collision 5: $a + B \rightarrow c + D$, a very standard quantum particle collision.

new physics!

some questions for all of us

answer, defend

A defensive tackle of mass 2 moving North tackles (and holds) a quarterback of mass 1 running at him with the same speed moving towards the South. What happens?

- A** they stop dead (no pun intended)
- B** The DT-QB mass moves North
- C** The DT-QB mass moves South
- D** don't know

answer, defend

Same problem.

DT

mass, DT: $m_D = 2$

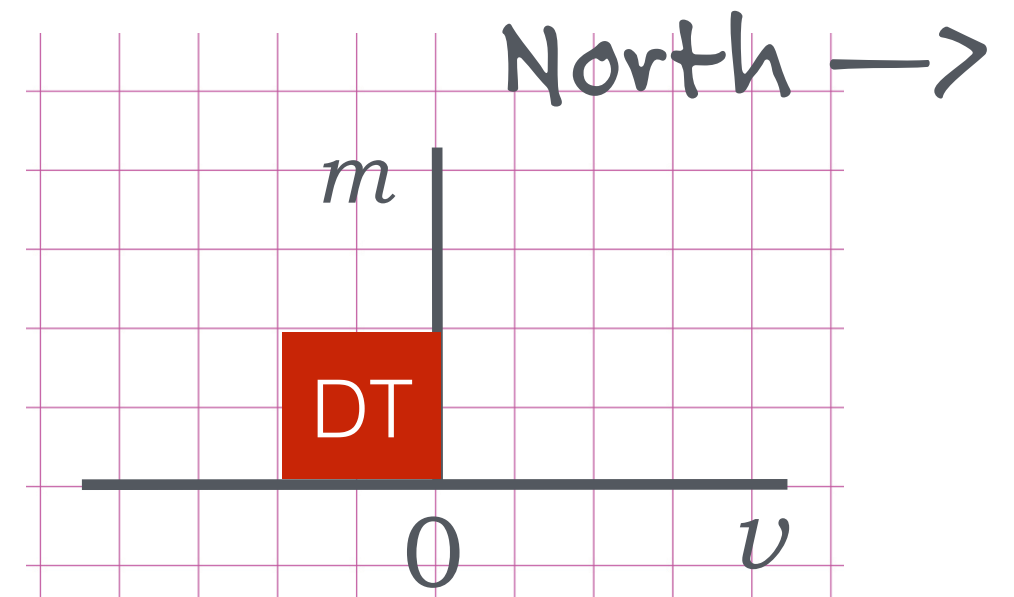

$v_0(\text{DT}) = 2 \text{ North}$

QB

mass, QB: $m_Q = 1$

$v_0(\text{QB}) = 2 \text{ South} = -2 \text{ North}$

The initial DT momentum is best represented by:

answer, defend

Same problem.

DT

mass, DT: $m_D = 2$

$v_0(\text{DT}) = 2 \text{ North}$

QB

mass, QB: $m_Q = 1$

$v_0(\text{QB}) = 2 \text{ South} = -2 \text{ North}$

The initial QB momentum is best represented by:

answer, defend

Same problem.

DT

mass, DT: $m_D = 2$

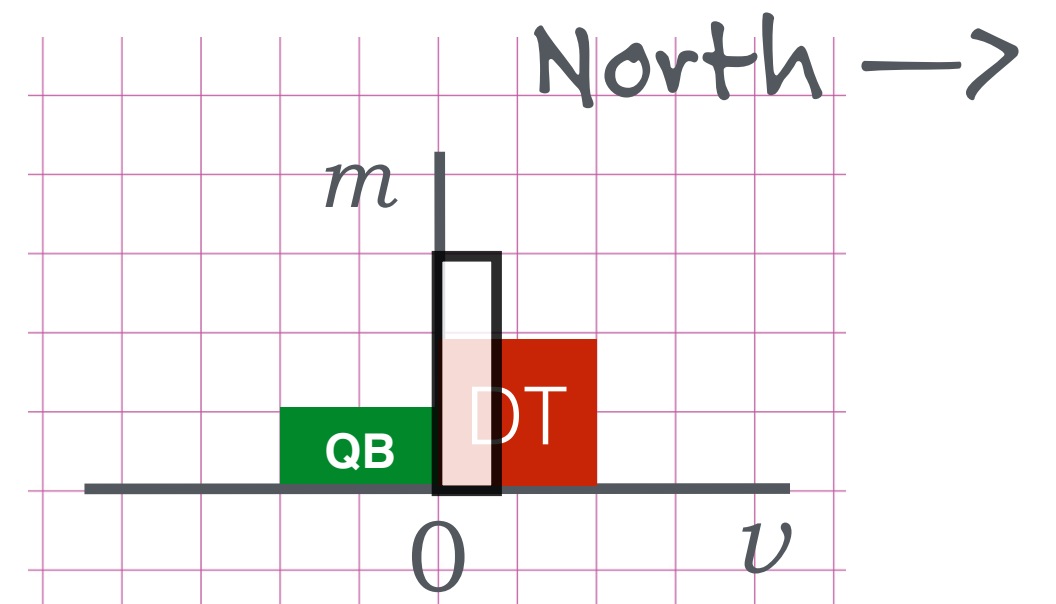

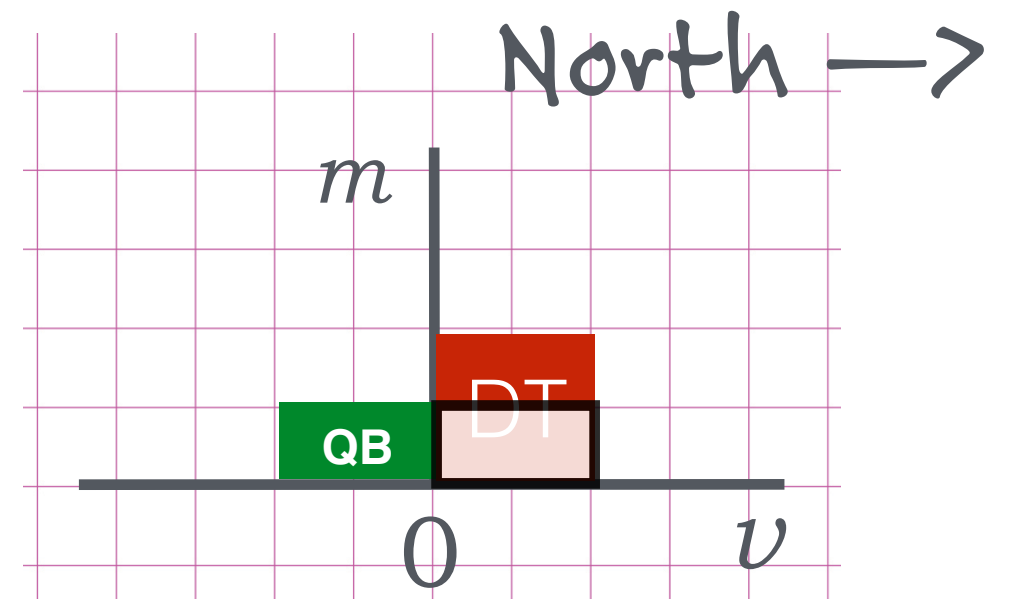

$v_0(\text{DT}) = 2$ North

QB

mass, QB: $m_Q = 1$

$v_0(\text{QB}) = 2$ South = -2 North

The combined DT-QB
momentum is best
represented by :

thermometer diagrams

answer, defend

Same problem.

DT

mass, DT: $m_D = 2$

$v_0(\text{DT}) = 2$ North

QB

mass, QB: $m_Q = 1$

$v_0(\text{QB}) = 2$ South = -2 North

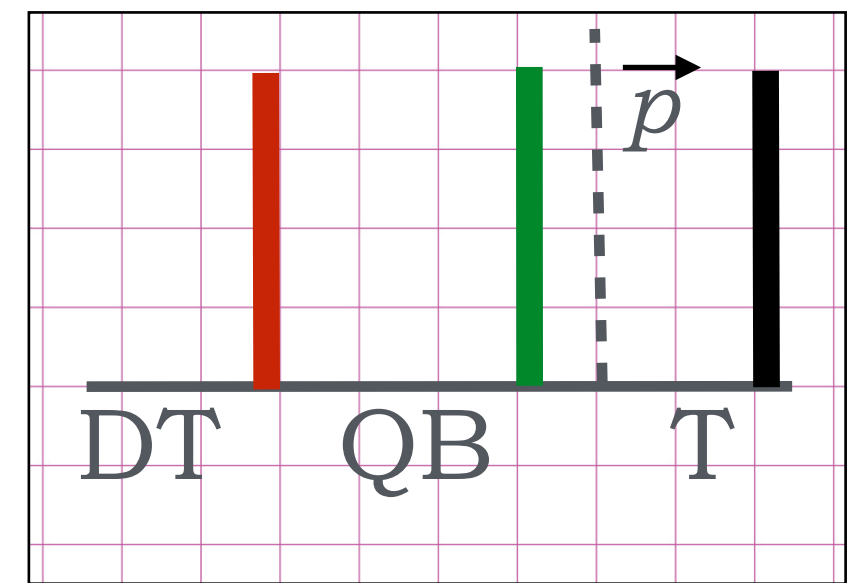

A

B

C

D

The initial momentum situation is best represented by:

answer, defend

DT

mass, DT: $m_D = 2$

$v_0(\text{DT}) = 2$ North

QB

mass, QB: $m_Q = 1$

$v_0(\text{QB}) = 2$ South = -2 North

A

0

B

2

C

4

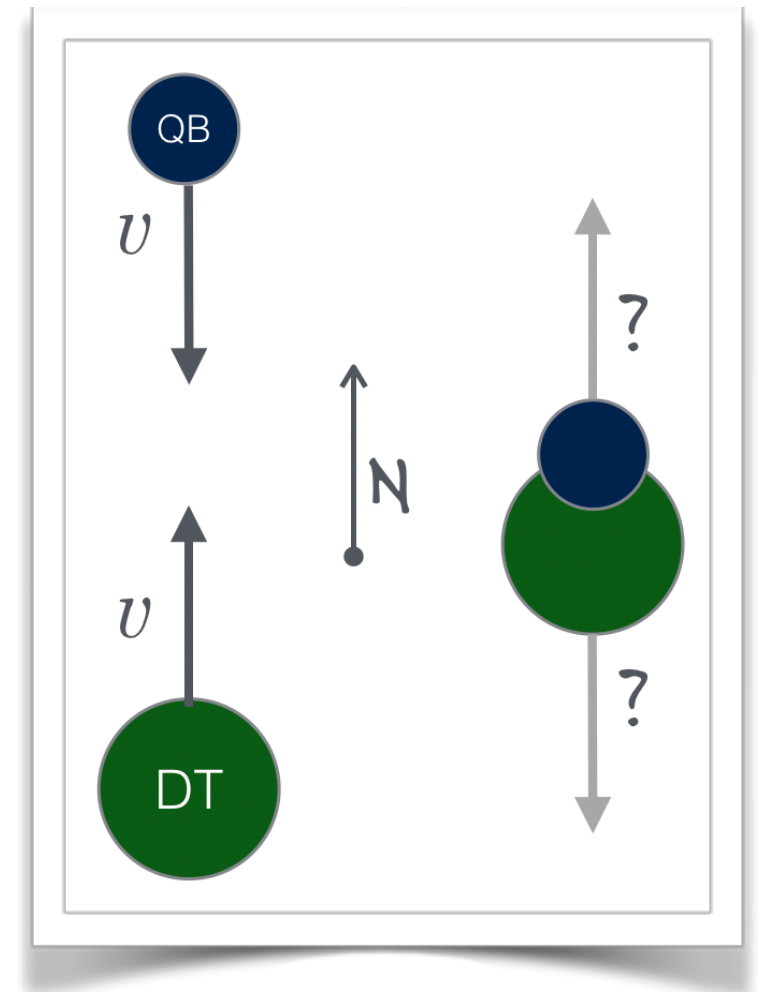

D

don't know

So, the momentum of the DT-QB combined object is what:

what we just did is this:

$$p_0(DT) + p_0(QB) = p(DT + QB)$$

$$4 - 2 = 2 = p(DT + QB)$$

answer, defend

The two momenta are:

A

12 & -24

B

12 & 24

C

4 & -2

D

don't know

$$\begin{aligned} p_{1,0} + p_{2,0} &= \\ (2)(6) + (4)(-6) &= \\ 12 - 24 &= \end{aligned}$$

answer, defend

A

0

B

12

C

-12

D

don't know

$$\begin{aligned} p_{1,0} + p_{2,0} &= \\ (2)(6) + (4)(-6) &= \\ 12 - 24 &= -12 \end{aligned}$$

answer, defend

↑
this is what happens

A

10

B

-10

C

-20

D

20

The momentum of 1 after the collision is:

$$p_1 = (2)(-10) = -20$$

answer, defend

The momentum of 2 after the collision is:

$$p_{1,0} + p_{2,0} =$$
$$(2)(6) + (4)(-6) =$$
$$12 - 24 = -12$$

$$p_1 = (2)(-10) = -20$$

A

8

B

-8

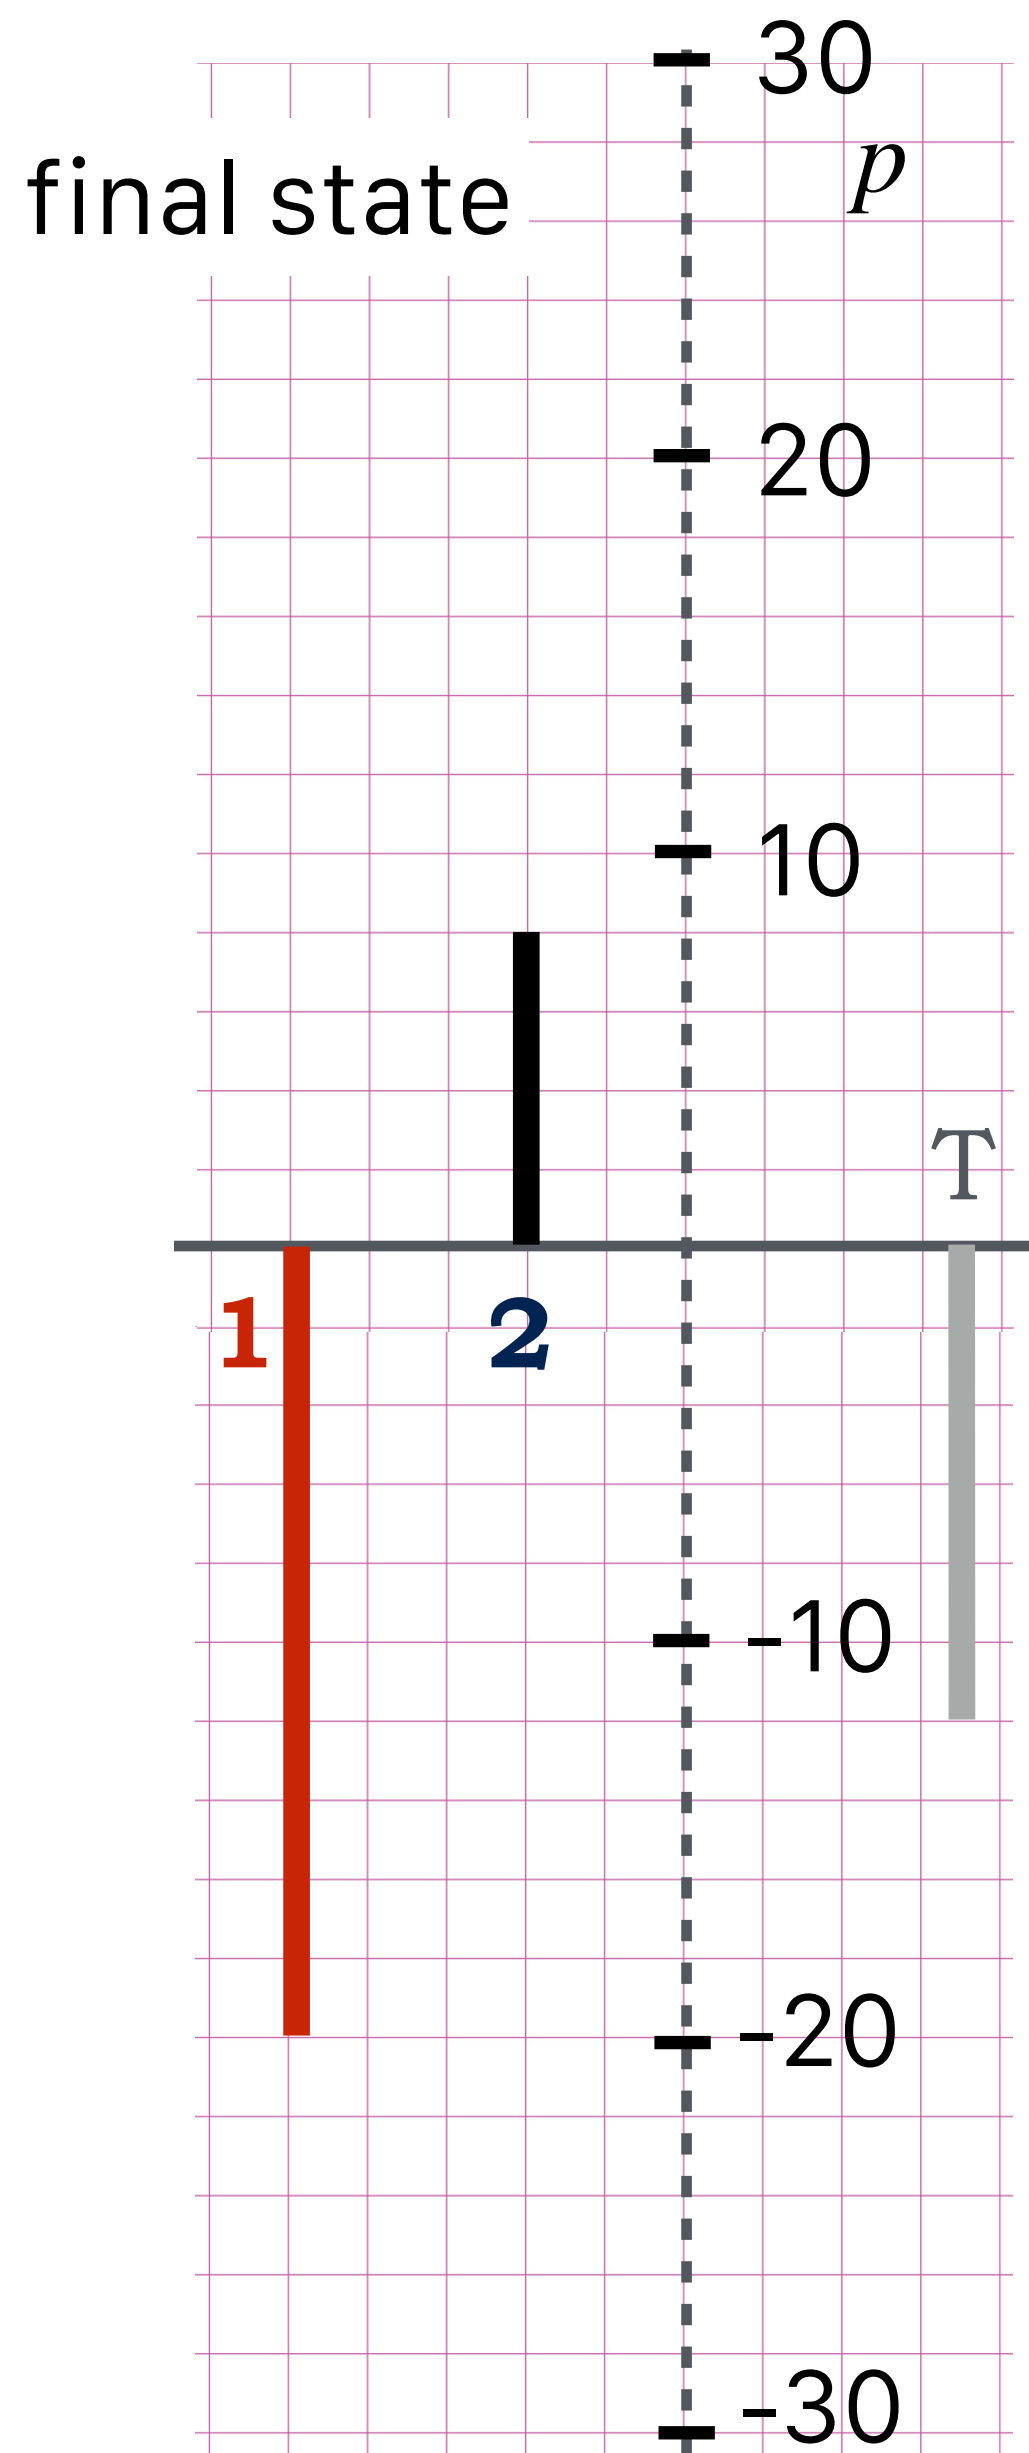

C

-32

D

32

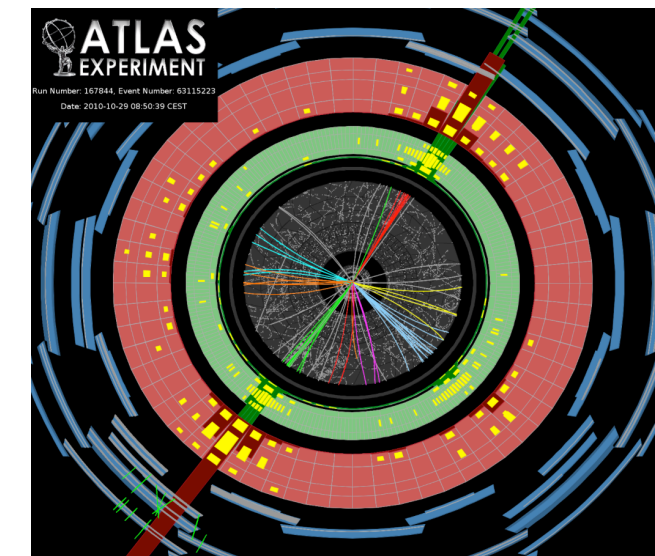

ATLAS detector at CERN

answer, defend

Which ATLAS event picture shows **momentum balanced** in the perpendicular plane?

project

airplanes are not involved

A

B

C

D
