

hi

Day 19, 22.03.2018

Einstein's Theory of General Relativity, 1

housekeeping

Gotta come to class

question about anything? I'll make a movie for you:

Special Relativity:

Hobson_GR.pdf is chapter 11 out of Hobson

MasteringAstronomy registration expiration now set to March 30

Homework and readings: MasteringAstronomy!

honors project began

https://qstbb.pa.msu.edu/storage/Homework_Projects/honors_project_2018/

contains the first instructions: the plan & tutorial

MinervaInstructions1_2018.pdf

dates:

complete first part, March 16

analyze data and complete writeup, April 20

Energy/momentum relations:

“rest mass”... m

the mass of an object in its own frame

“relativistic mass”... $m_R = m\gamma$

the mass of a moving object

“Energy”... $E_T = m\gamma c^2$

the total Energy of a moving object

“rest Energy”... $E = mc^2$

Kinetic Energy... $K = mc^2(\gamma - 1)$

the energy due to motion

the mass-energy of an object in its own frame

Relativistic momentum... $p = m\gamma u$

momentum for each component of space

Energy-momentum relation... $E_T^2 = (mc^2)^2 + (pc)^2$

an alternative, useful expression

particle colliding beam

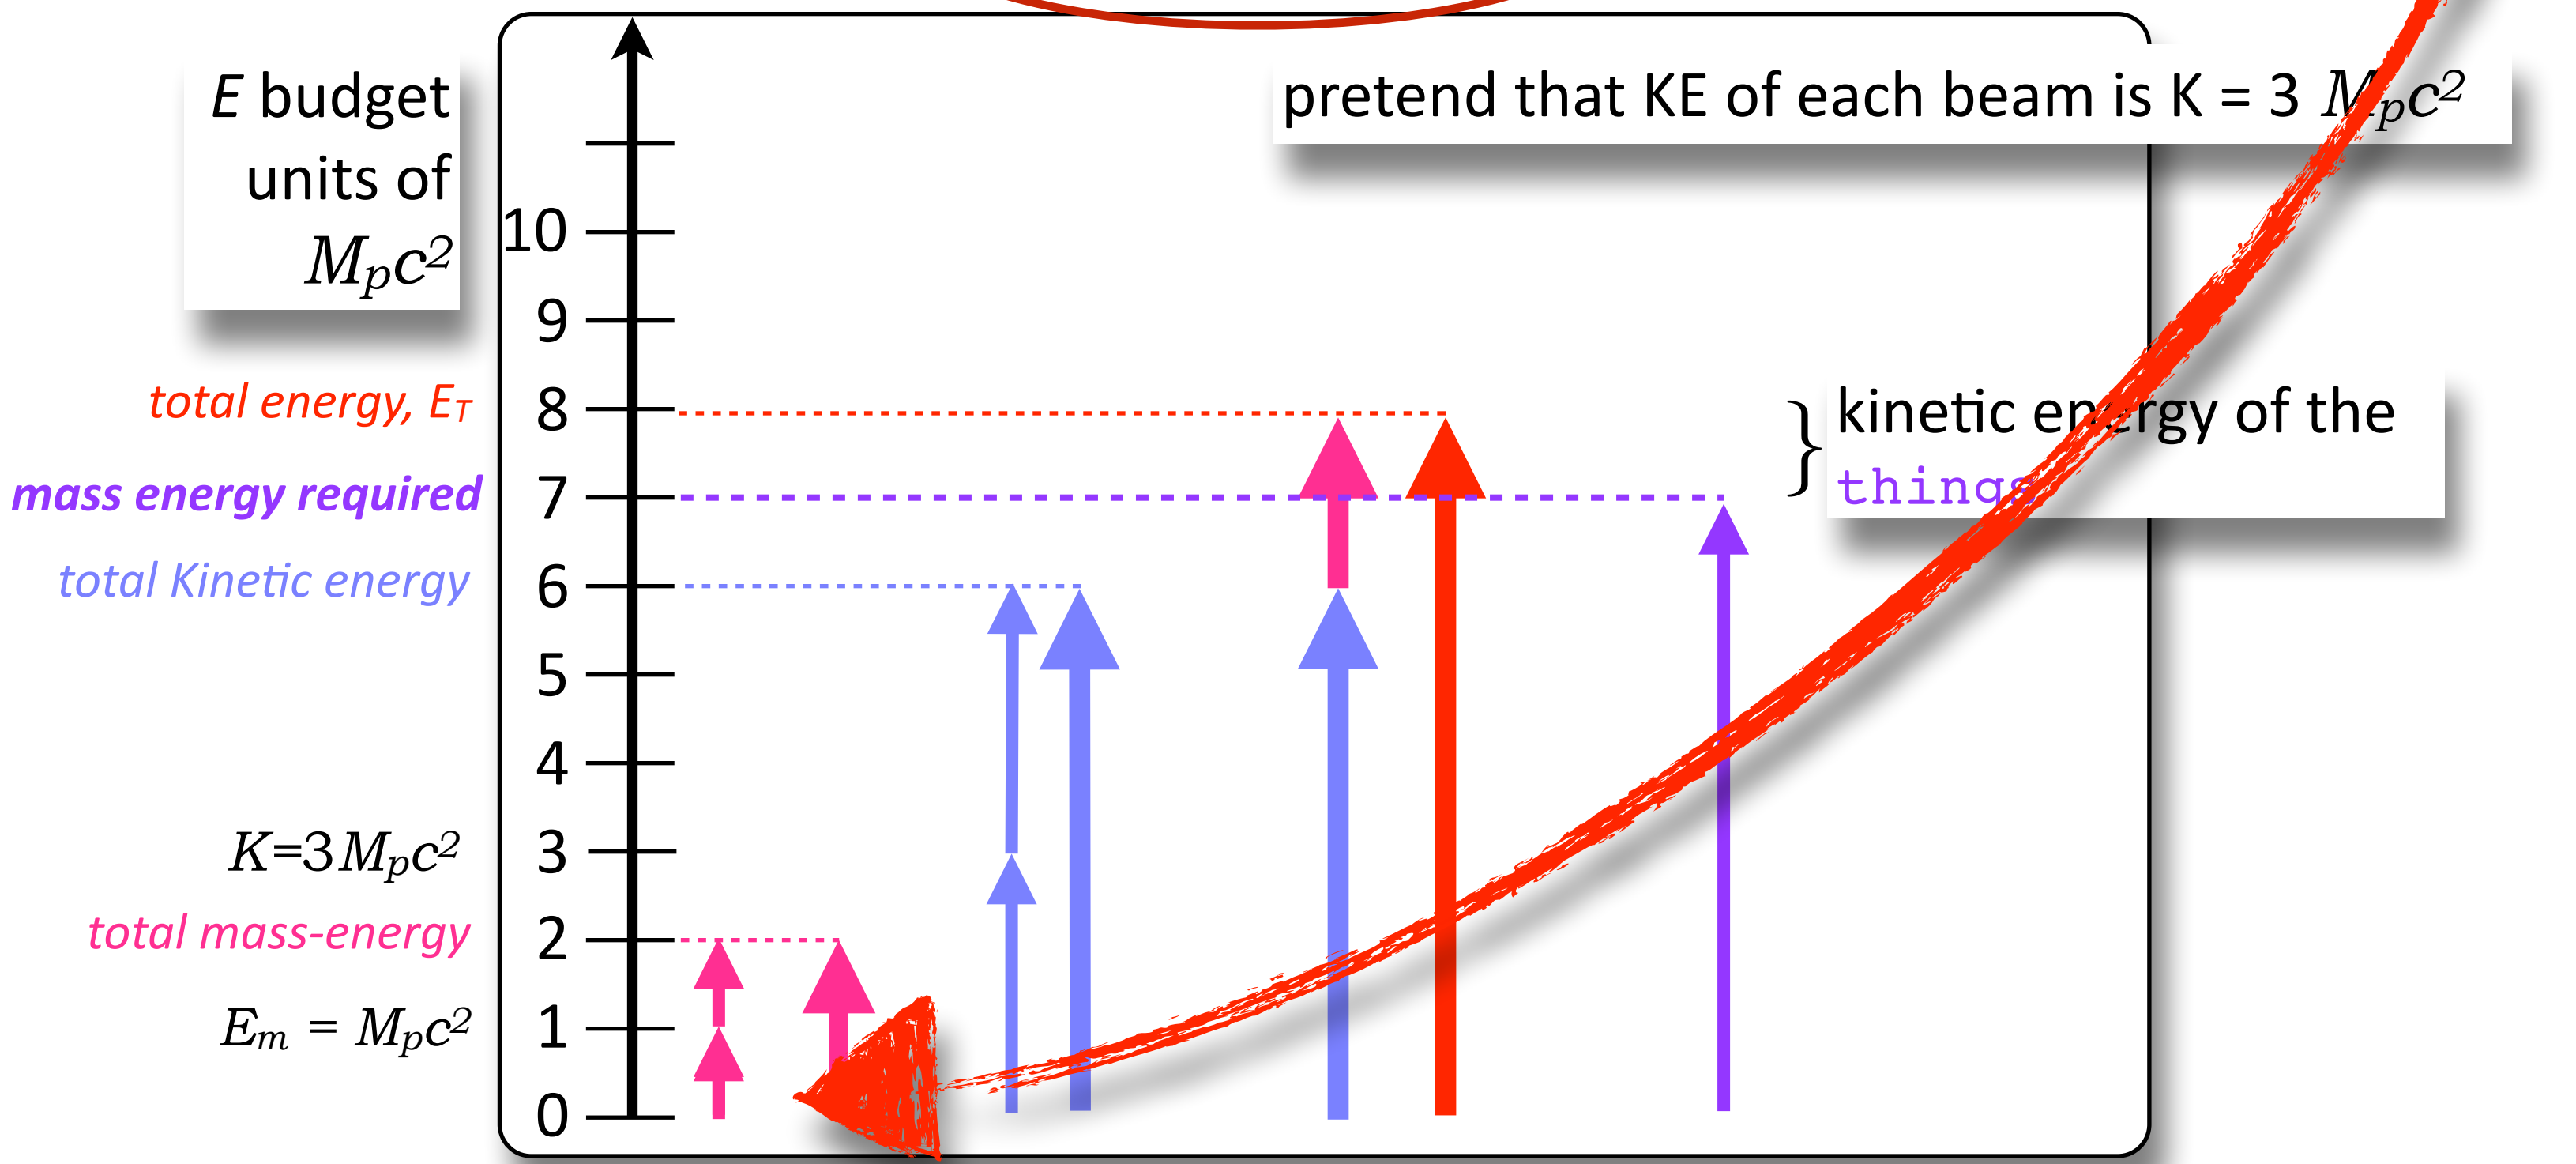

$$E_T = \text{mass energy} + \text{kinetic energy} \quad + \quad E_T = \text{mass energy} + \text{kinetic energy}$$

1 proton's mass = M_p
1 proton's mass energy = $M_p c^2$

Use head-on collisions to make objects more massive than protons.

Make Two things that each have $M(\text{thing}) = 3.5 \cdot M_p$

what about the

"energy of mass" and "mass of energy" crack?

a hydrogen atom, take 2

weighs less than the components of a hydrogen atom

so it can't fall apart into its components

where is that "missing mass"?

in the energy of the Electric Field,

stupid
elevator
trick, #1

gravitational
attraction

gravitational
force

stupid
elevator
trick, #2

gravitational
attraction

force up to
create an
acceleration
of $1g$

There is no mechanical or electromagnetic experiment he can perform

that would tell him that he was

1. being attracted by the Earth **due to gravity** or
2. being pulled **and accelerated** g with no gravitational field anywhere

There is no mechanical or electromagnetic experiment he can perform

that would tell him that he was

1. being attracted by the Earth **due to gravity** or
2. being pulled **and accelerated** g with no gravitational field anywhere

said another way

any effect in an accelerated rest frame

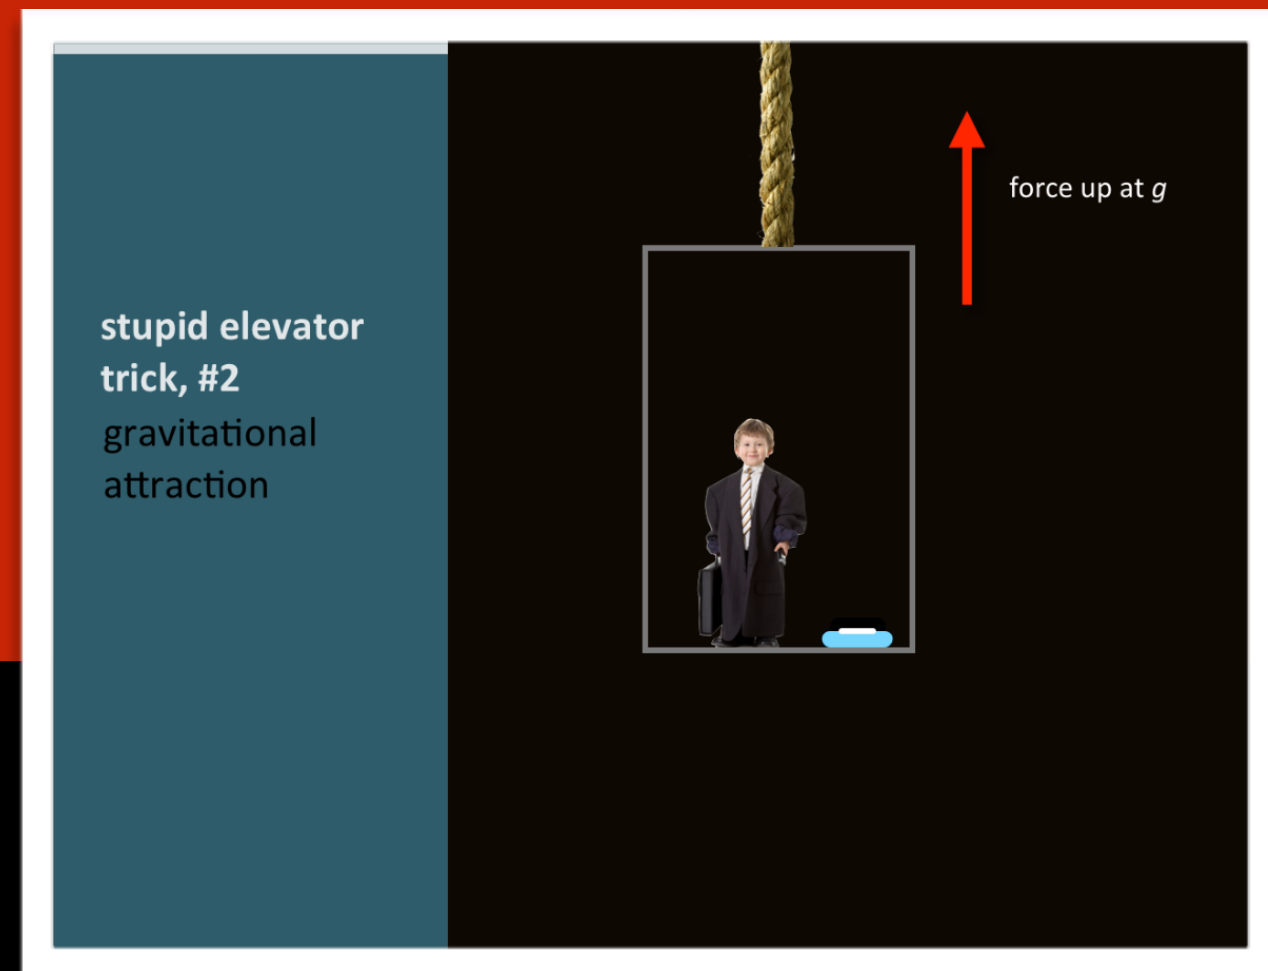

should occur in a rest frame at rest in a gravitational field

called sometimes

weak Equivalence Principle

identical

some subtly to the Equivalence Principle

force down at g

gravitational force

$$F = G \frac{Mm(\text{grav})}{R^2}$$

EP says that if these are the same

the laws of physics will be identical

So, anything that happens in L happens in R and visa versa

$$m(\text{grav}) \equiv m(\text{inertial})$$

outer space

force up at g

inertial force

$$F = m(\text{inertial})a$$

3 light tricks

force up at g

relative to couch people:

at rest

constant speed up

accelerated, up

boy observes light beam: **horizontal**

straight, slanted

curved

CP observe light beam: **horizontal**

horizontal

horizontal

what's "straight"?

around a gravitating mass, the curve path is still:

"shortest distance between two points"

in practice: the path that a beam of light would take

BUT: light travels differently shaped paths between
relatively accelerated frames

Then the Equivalence Principle requires:

light should also curve in the presence of gravity

light paths

map the shape of space

not just
light

acceleration
messes with
geometry

straight is not
straight

and Einstein knew
that this was
problematic

$$C = 2\pi R$$

experimentally:
you could show that

Now, start it rotating.

fast...so special relativistic effects are apparent.

The ruler on the radius?

The rulers on the circumference?

$$C \neq 2\pi R$$

The rules of Euclid's geometry – flat geometry – don't hold for an accelerating object.

Hold this thought: accelerated motion seems to change regular Geometry.

acceleration
warps space

from the Equivalence
Principle

gravity
should
warp space

light beam

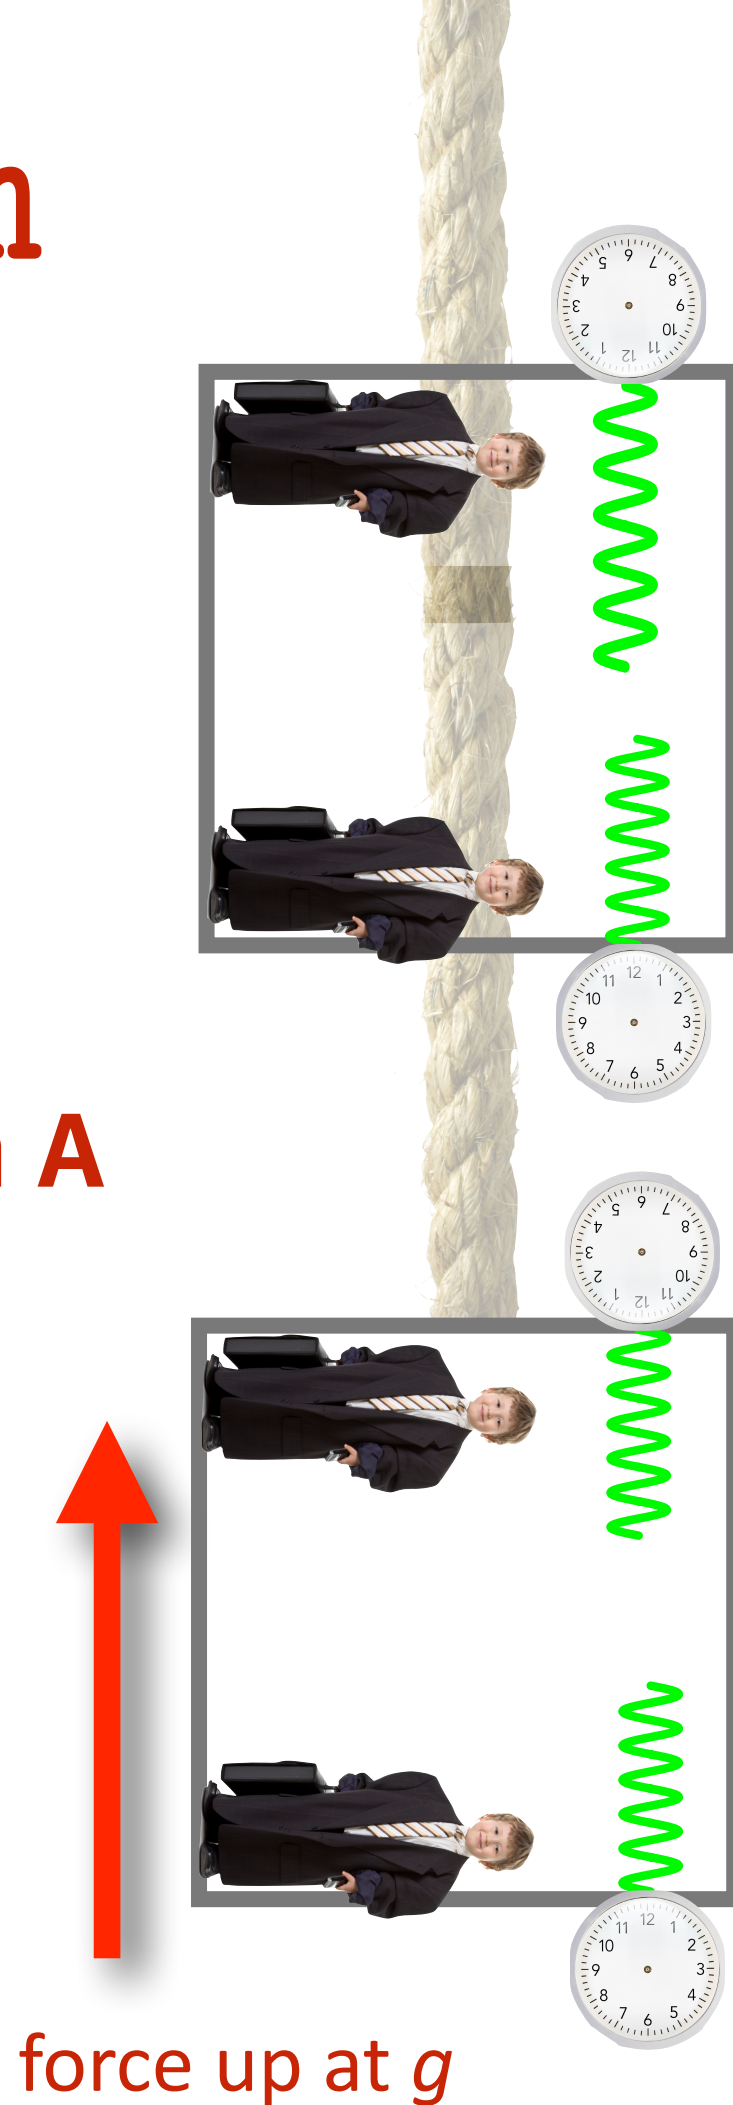

what about time?

use a clock

accelerating....

so **B** moving away from **A**

A and B are different inertial frames at each time

B receives at say 5 ticks per second

A 1 second

B would say that A's clock has longer between ticks:

Runs Slower

A sends at say 10 ticks per second

1 second

light beam

same idea as last time, slight different take

Equivalence Principle would require that:

B would say that A's clock has longer between ticks:

Runs Slower

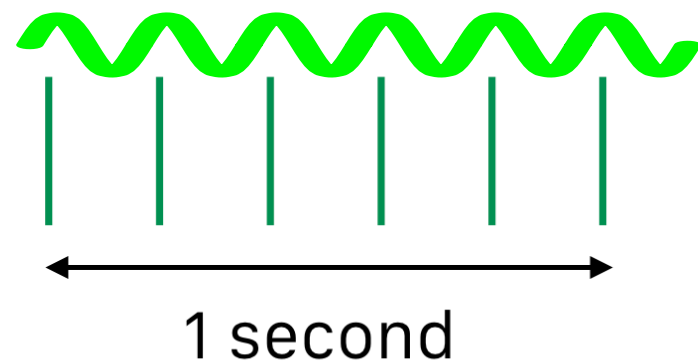

“red shift”

longer between ticks?

like the wavelength of the light is longer as seen by B than as seen by A

longer wavelength

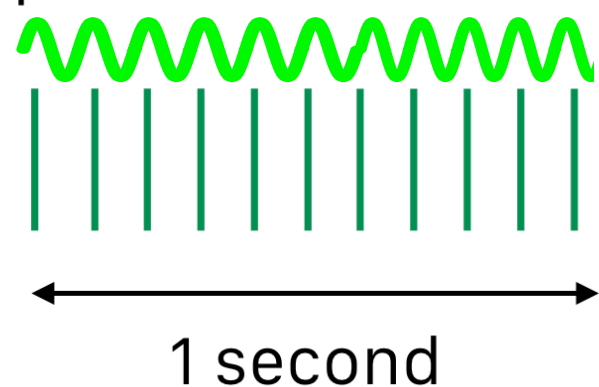

receives at say 5 ticks per second

B would say that A's clock has longer between ticks:

Runs Slower

sends at say 10 ticks per second

an apparent shift to

• a longer wavelength... “red shift”

• and a slower clock

acceleration
warps time

from the Equivalence
Principle

gravity
should
warp time

“

I was sitting in a chair in the patent office at Bern when all of a sudden a thought occurred to me. If a person falls freely, he will not feel his own weight.

Albert Einstein

reminiscence from 1907 -

later he called this the "happiest thought of my life"

free-fall.

is a strange state of motion

you don't notice your own weight

16 videos

training in the Vomit Comet KC 135

free fall is special

free-fall in gravity

another Equivalence Principle

Neither situation "sees" gravity

you can "transform" gravity away

light must bend in the presence of gravity

gravity

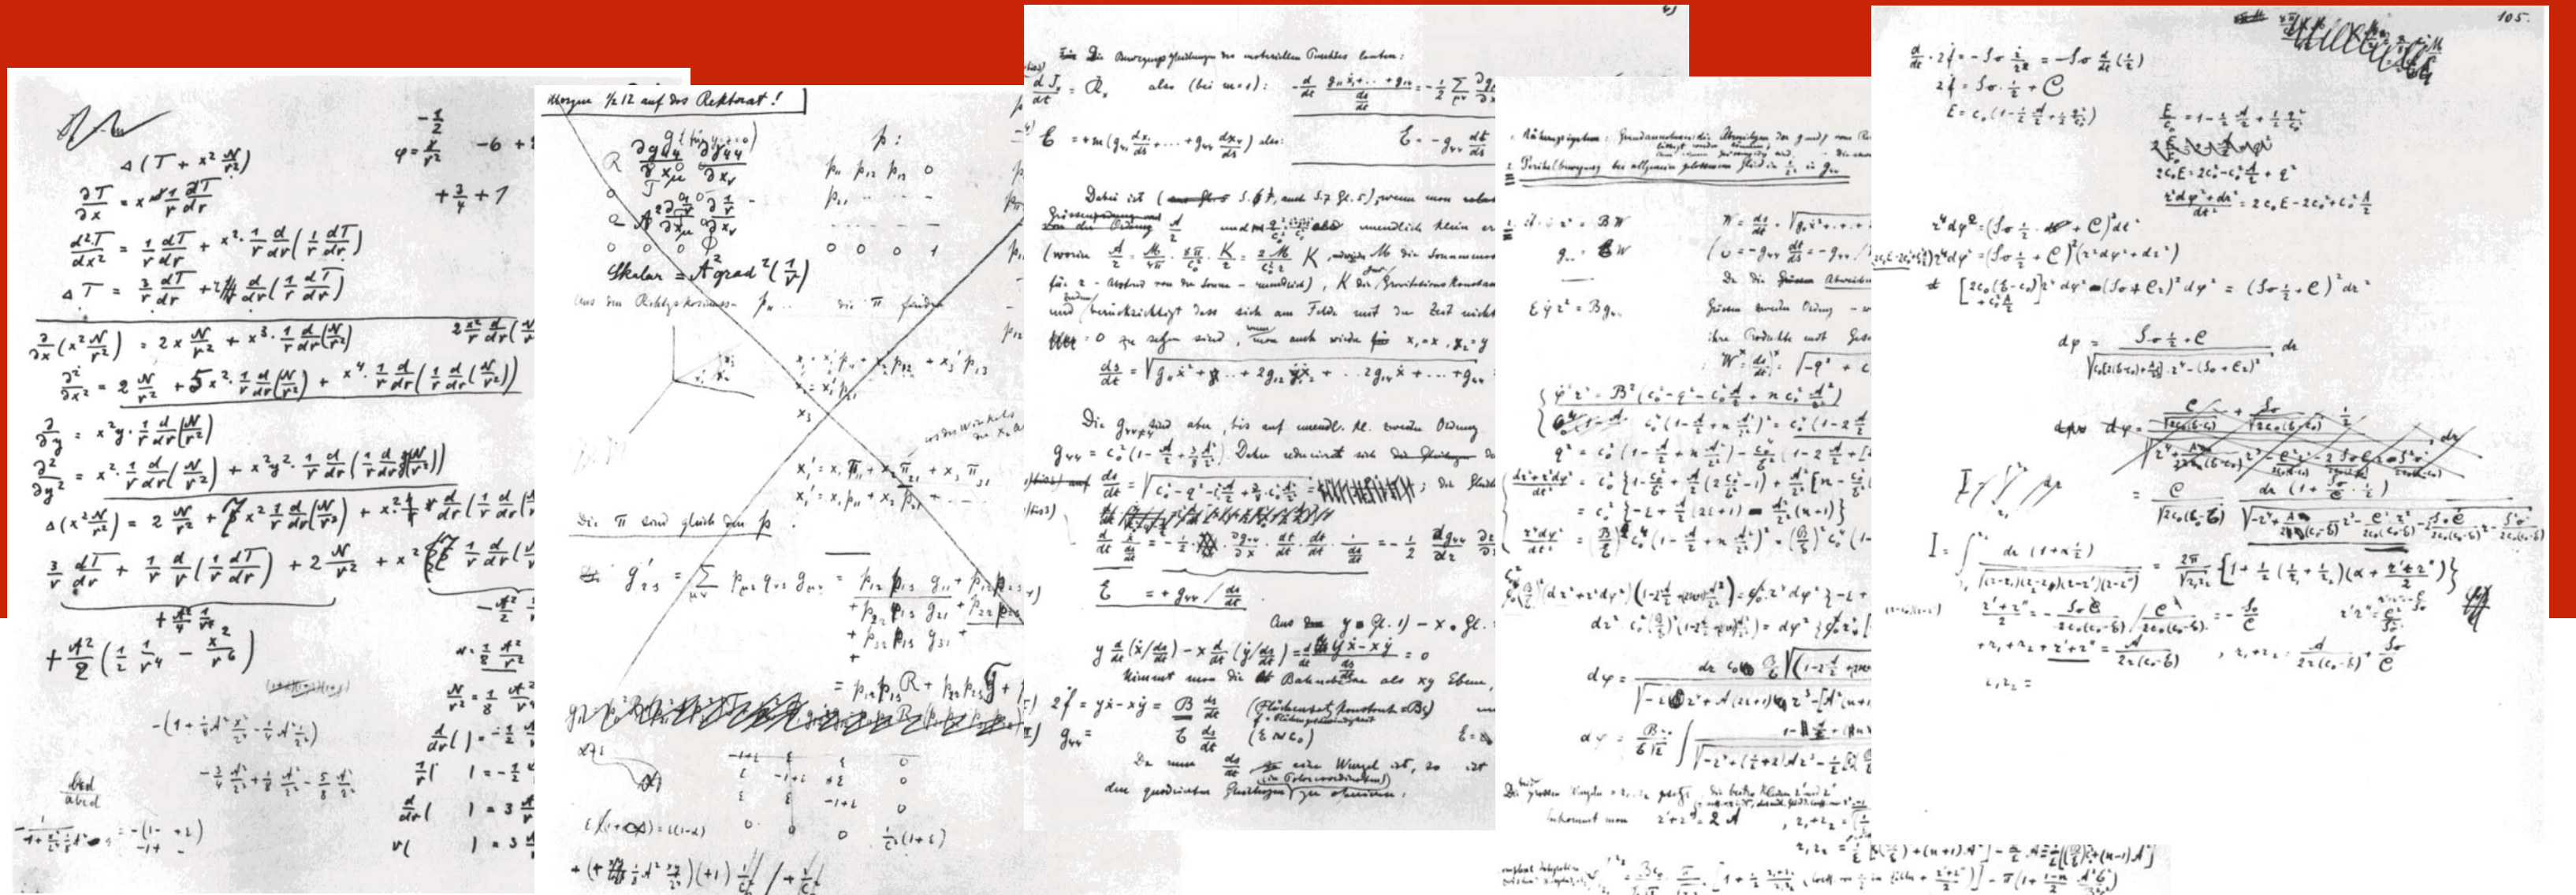

no gravity no gravity

gravity

modeling all of this was

arguably one of the most technically challenging piece of physics ever

the question is

Could gravity be an illusion?

A circumstance relative only to your state of motion?

Could gravity be "transformed away"

by the change of a reference frame?

Maybe gravity is not a force at all?

there should be observable consequences

and Einstein knew it

and calculated them - half a decade of Newton-like concentration

what we've found:

acceleration
warps space

from the Equivalence
Principle

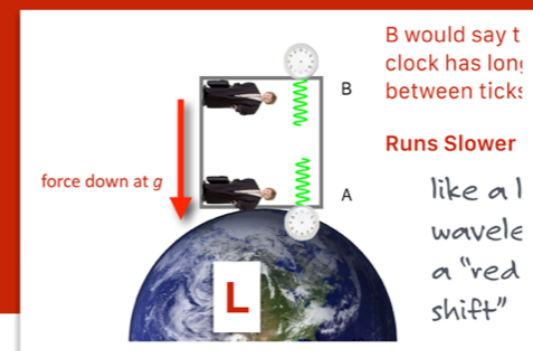

gravity
should
warp space

acceleration
warps time

from the Equivalence
Principle

gravity
should
warp time

gravitating bodies..masses :

warp both space and time.

They warp: **spacetime**

Einstein had to learn that geometry & energy-mass

interact & that space and time respond

That took him 5 years after his happy thought to figure out

he had to go back to school...privately with his buddy Marcel Grossman

tests of general relativity

There are a handful of
“classic tests”

of these ideas:

that space and time are warped by
gravitation

Pound Rebka Gravitational Red Shift

The perihelion of Mercury's Orbit

Light bending around the Sun

“Gravitational Lensing”

“The Hafele-Keating experiment”

“Binary Pulsar period”

Black Holes

light beam

what about time?

use a clock

Gravitational Red Shift is built into your phone's GPS

so **B** moving away from **A**
A and B are different inertial frames at each time
if you get where you want to go, you just confirmed General Relativity

B receives at say 5 ticks per second

B would say that A's clock is longer between ticks:

Runs Slower

A sends at say 10 ticks per second

“Advance of the Perihelion of the Orbit of Mercury”

Vulcan?

Mercury

misbehaves

“advance of the perihelion”

Einstein
calculated it
including the
sun’s warping of
space

point of closest approach of
the orbit advances by 43
seconds of arc per century

1916: Got precisely the right amount.

Had heart palpitations when the result
appeared on his paper...

the mother of all experiments

the "solar eclipse" experiment

The image shows a screenshot of a Google search results page for the query "solar eclipse" experiment. The search bar at the top contains the text "solar eclipse" experiment. Below the search bar, there are navigation tabs for "All", "Videos", "Images", "News", "Shopping", and "More". The search results are displayed below, starting with "About 387,000 results (0.70 seconds)".

The first result is titled "May 29, 1919: A Major Eclipse, Relatively Speaking | WIRED" with a URL https://www.wired.com/2009/05/dayintech_0529/. The snippet describes the first experimental test of Albert Einstein's general theory of relativity during a total solar eclipse on May 29, 1919.

The second result is titled "Tests of general relativity - Wikipedia" with a URL https://en.wikipedia.org/wiki/Tests_of_general_relativity. The snippet mentions the general theory of relativity's introduction in 1915 and the 1919 solar eclipse experiment.

The third result is titled "Creating eclipses in the classroom | www.scienceinschool.org" with a URL www.scienceinschool.org/2012/issue23/eclipses. The snippet discusses solar and lunar eclipses and their causes.

The fourth result is titled "NASA's Science During March 2016 Solar Eclipse | NASA" with a URL <https://www.nasa.gov/feature/goddard/2016/a-moment-in-the-suns-atmosphere>. The snippet describes the experiment performed in Indonesia during the March 2016 total solar eclipse.

Below the text results, there is an "Images for 'solar eclipse' experiment" section. It shows a row of six small images: a person using a telescope, a total solar eclipse, a person using a telescope, a diagram of the sun's atmosphere, a diagram of the sun's atmosphere, and a diagram of the sun's atmosphere. Below the images is a link to "More images for 'solar eclipse' experiment" and a "Report images" button.

The fifth result is titled "Citizen Science for the Great American Solar Eclipse - Sky & Telescope" with a URL www.skyandtelescope.com/get.../pro.../citizen-science-great-american-solar-eclipse/. The snippet describes the Citizen CATE Experiment.

The sixth result is titled "solar eclipse experiment: Topics by Science.gov" with a URL <https://www.science.gov/topicpages/s/solar+eclipse+experiment.html>. The snippet describes a rocket-borne solar eclipse experiment.

The seventh result is titled "Make Your Own Solar Eclipse-A Hands-on Astronomy Experiment ..." with a URL <https://www.teachervision.com/activity/make-your-own-solar-eclipse>. The snippet describes a hands-on activity for students.

The eighth result is titled "Solar Eclipse Model Experiment | Education.com" with a URL www.education.com/ScienceFair/FirstGrade/Astronomy. The snippet describes a science fair project idea for 1st grade.

“Solar Eclipse Experiment”

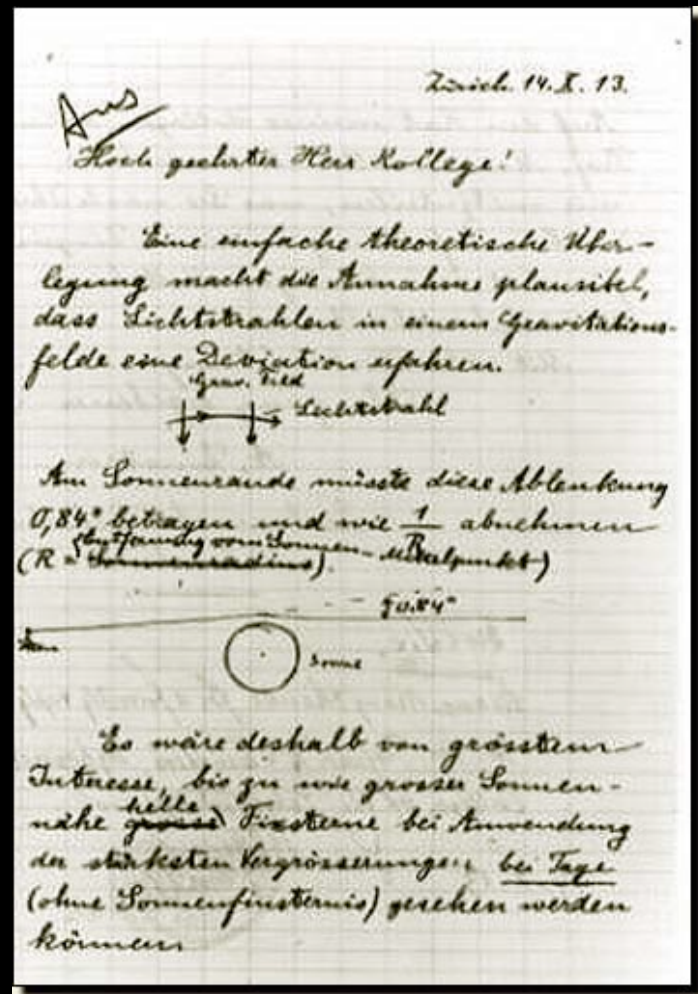

Not totally surprising...light has energy...behaves like mass - it should bend

The deflection should be about 1/4 milli-degree

The star is actually at A

But it would appear to be at B

1911 calculation – initially wrong, only the E=mc² component...

In 1915 he changed his 1911 calculation to include the warping of space...worth x2

light

obeys the strong Equivalence Principle

the laser pointer...for real

eclipse experiment May 29, 1919

LIGHTS ALL ASKEW IN THE HEAVENS

Men of Science More or Less
Agog Over Results of Eclipse
Observations.

EINSTEIN THEORY TRIUMPHS

Stars Not Where They Seemed
or Were Calculated to be,
but Nobody Need Worry.

A BOOK FOR 12 WISE MEN

No More in All the World Could
Comprehend It, Said Einstein When
His Daring Publishers Accepted It.

Special Cable to THE NEW YORK TIMES.
LONDON, Nov. 9.—Efforts made to put in words intelligible to the non-scientific public the Einstein theory of light proved by the eclipse expedition so far have not been very successful. The new theory was discussed at a recent meeting of the Royal Society and Royal Astronomical Society. Sir Joseph Thomson, President of the Royal Society, declares it is not possible to put Einstein's theory into really intelligible words, yet at the same time Thomson adds:
"The results of the eclipse expedition demonstrating that the rays of light from the stars are bent or deflected from their normal course by other aerial bodies acting upon them and consequently the inference that light has weight form a most important contribution to the laws of gravity given us since Newton laid down his principles."
Thompson states that the difference between theories of Newton and those of Einstein are infinitesimal in a popular sense, and as they are purely mathematical and can only be expressed in strictly scientific terms it is useless to endeavor to detail them for the man in the street.

One of the speakers at the Royal Society's meeting suggested that Euclid was knocked out. Schoolboys should not rejoice prematurely, for it is pointed out that Euclid laid down the axiom that parallel straight lines, if produced ever so far, would not meet. He said nothing about light lines.

Some cynics suggest that the Einstein theory is only a scientific version of the well-known phenomenon that a coin in a basin of water is not on the spot where it seems to be and ask what is new in the refraction of light.

Albert Einstein is a Swiss citizen, about 50 years of age. After occupying a position as Professor of Mathematical Physics at the Zurich Polytechnic School and afterward at Prague University, he was elected a member of Emperor William's Scientific Academy in Berlin at the outbreak of the war. Dr. Einstein protested against the German professors' manifesto approving of Germany's participation in the war, and at its conclusion he welcomed the revolution. He has been living in Berlin for about six years.

When he offered his last important work to the publishers he warned them there were not more than twelve persons in the whole world who would understand it, but the publishers took the risk.

caption: "A new great figure in world history: Albert Einstein, whose investigations signify a complete revision of our concepts of Nature, and are on a par with the insights of a Copernicus, a Kepler, and a Newton."

New York Times, December 3, 1919

EINSTEIN EXPOUNDS HIS NEW THEORY

It Discards Absolute Time and Space, Recognizing Them Only as Related to Moving Systems.

IMPROVES ON NEWTON

Whose Approximations Hold for Most Motions, but Not Those of the Highest Velocity.

INSPIRED AS NEWTON WAS

But by the Fall of a Man from a Roof Instead of the Fall of an Apple.

Copyright, 1919, by The New York Times Company
Special Cable to THE NEW YORK TIMES.

BERLIN, Dec. 2.—Now that the Royal Society, at its meeting in London on Nov. 6, has put the stamp of its official authority on Dr. Albert Einstein's much-debated new "theory of relativity," man's conception of the universe seems likely to undergo radical changes. Indeed, there are German savants who believe that since the promulgation of Newton's theory of gravitation no discovery of such importance has been made in the world of science.

When THE NEW YORK TIMES correspondent called at his home to gather from his own lips an interpretation of what to laymen must appear the book with the seven seals, Dr. Einstein him-

now recovered from exhaustion and photogenic: 1920

Gravitational Lensing - an off-hand prediction of Einstein

www.spacetelescope.org

Foreground objects can distort, and magnify distant background galaxies.

Today, the dramatic effects of light bending are observed in the form of gravitational lensing

tool for studying dark matter: looking for Massive Astrophysical Compact Halo Objects

this is the bending of light around a very massive object, like a large galaxy

“Gravitational Lensing”

“Einstein Cross” - 4 images of a quasar

MACHOS
Credit: Canada-France-Hawaii Telescope Corporation 2006.

Second view of this:

“The Hafele-Keating experiment”

an atomic clock was carefully carried around the world in 1972 and carefully calibrated and compared with ground-based clocks

There are a number of corrections: accelerations, decelerations, the rotation of the orbit, the fact that the earth is not inertial - but relativity was absolutely correct

Predicted Effect	Flying East	Flying West
GTR (Gravitation)	+ 144 ± 14 ns	+ 179 ± 18 ns
STR (Velocity)	- 184 ± 18 ns	+ 96 ± 18 ns
Total	- 40 ± 23 ns	+ 275 ± 21 ns
measured:	- 59 ± 10 ns	+273 ± 7 ns

J. Hafele and R. Keating

about half of their effect was due to the gravitational difference between Earth and the flight's altitude

redone twice more in airplanes and rockets/satellites

spacetime in general relativity

Earth's orbit is then just us following the shortest distance around the sun...not a gravitational force

Einstein got rid of gravitational forces in GR

Masses warp spacetime...

Since the shortest distance between two spacetime points is a light-path, this "maps" the shape

In GR gravity is not a force, but a "topography" of spacetime that forces objects to take the shortest curved path in spacetime

okay .

Spacetime might
be curvy, bumpy,
... "warped"

a "non-Euclidean
geometry"?

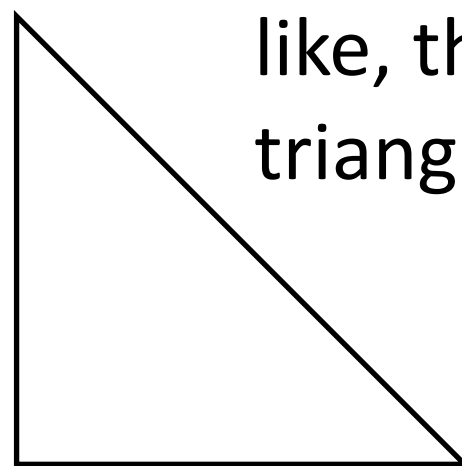

Euclid's Geometry starts with 4 terms and 4+1 postulates:

Point, Line, Plane, Space

1. A straight line can be drawn between any two points
2. A finite line can be extended infinitely in both directions
3. A circle can be drawn with any center and any radius
4. All right angles are equal to each other

5. Given a line and a point not on the line, only one line can be drawn through the point parallel to the line

a System of a series of proofs, each building on the previous, to a whole system of mathematics

like, the sum of the interior angles of any triangle is 180°

like, Pythagoras' Theorem

like, actually... a lot of algebra problems before algebra was invented

Einstein's mathematics of GR

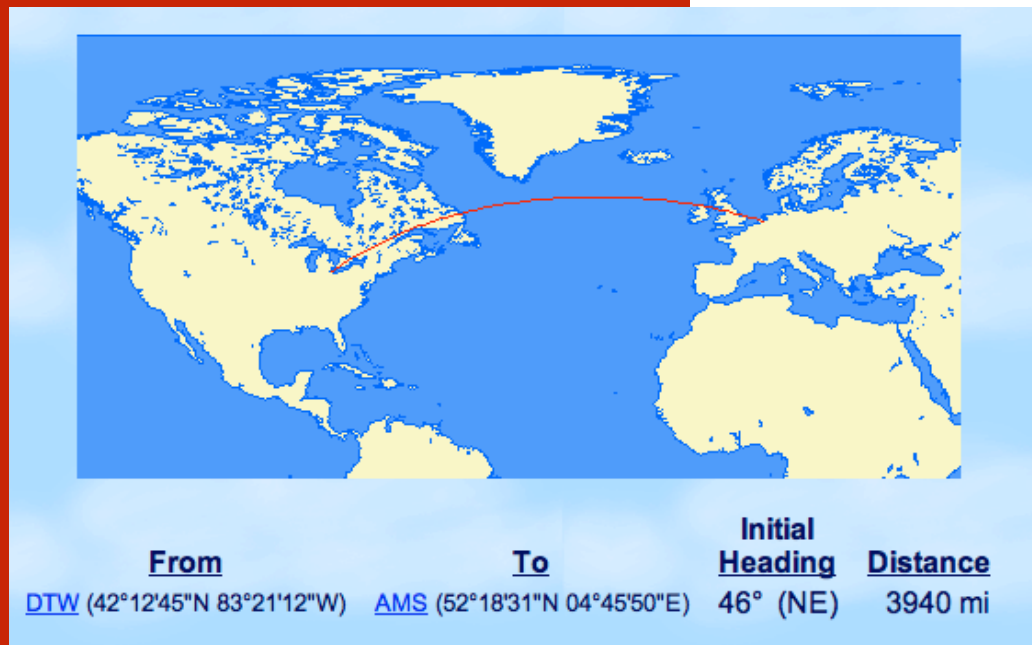

led him to have to consider non-Euclidean Geometries
which were still timidly being studied by mathematicians

not so far-fetched

we live in such a geometry

what's a
"straight
line"

on a sphere?

shortest distance
between 2 points

Euclid's 5th Postulate

parallel lines
never meeting?

only in a flat space

sum of interior
angles in a triangle
 $= 180^\circ$?

only in flat space

on sphere $> 180^\circ$

‘warping’

means that geometry

spacetime geometry

mixes with mass, energy, and pressure

General Relativity

Einstein's GR
equation

complicated
mathematics

geometry of
spacetime

mass-energy,
pressure,
&
momentum

$$R_{\mu\nu} - \frac{1}{2}Rg_{\mu\nu} = \frac{8\pi}{c^4}T_{\mu\nu}$$

we'll call it: "G = T"

**Einstein grossly
underestimated**

the richness of his theory

he knew he'd exhausted the possible solutions to
the GR equations

He was wrong...and irritable about it

wrong.
Almost
immediately:

from the
foxhole, 1915

Karl Schwarzschild, 1873-1916

Yes. I mean *from* a foxhole.

The **first exact solution** to GR...Einstein had used some approximations for light-bending, etc.

The equations of spacetime outside of a spherical mass.

a big mass.

escape

Suppose a rocket is shot straight up... when it goes “ballistic” (no propulsion)...what happens?

It depends.

More initial velocity, the more likelihood that the rocket will escape the pull of the Earth’s gravity.

This happens when the kinetic energy = potential energy

$$v_{esc} = \sqrt{\frac{2GM_E}{R_E}}$$

From Earth: 11.2 kilometers per second...~25,000 mph

what about light?

suppose the
question is not:

“What’s the escape
velocity from a
sphere of mass M ?”

BUT

“What’s the radius of a mass M for which the escape velocity
is $= c$?”

$$v_{\text{esc}} = \sqrt{\frac{2GM_E}{R_E}} \longrightarrow c = \sqrt{\frac{2GM}{R_S}}$$

R_S called the Schwarzschild Radius

$$R_S = \frac{2GM}{c^2}$$

It seemed to be a magic radius...

the
Schwarzschild
Radius falls
out of his
solution to
G.R.

it's not likely

RS is incredibly small

*and density,
incredibly high*

All of the mass of:

1.6 B meters

inside of R_S :

$R_S = 3000$ m

12 M meters

$R_S = 1$ cm

Impossible, right?. But, since Nature doesn't do infinity...thought to be a disaster for the theory.

Black Holes

The Schwarzschild Radius was not a flaw in the theory
simply an insult from Nature!

Einstein calculated that the normal formation of a star of gravitational accretion could never form in so small a volume...and stars get bigger not smaller, right?

1939: Robert Oppenheimer & Hartland Snyder showed how.

everyone
fretted over
this for
more than a
decade

1932, Georges
Lemaître found
that a slight
change of
coordinate axes

changed the problem
completely
